Shielding Systems Performing Multiple Tasks.

Increasing demands are being placed on shielding systems: higher temperatures, durability, multi-functionality, and improved noise, vibration, and harshness (NVH) properties. These are key considerations in the design and manufacturing of Dana’s thermal-acoustical protective shielding (TAPS).
Thermal-Acoustical Protective Shielding (TAPS)

Multi-Function Engine Technology

TAPS is a highly functional engine component composed of various layers, each with a specific job to perform. These shields protect from extreme temperatures, suppress noise, and lower overall mass with the use of thinner materials, leading to improved fuel economy.

Product Features and Benefits

- Three-layer construction
- Insulating/damping center layer
  - Exceptional thermal performance
  - NVH improvements reduce surface noise
- Fully hemmed edges
  - Eliminate sharp edges, increasing worker safety
  - Maintain insulation for life of the shield
  - Eliminate vibrations associated with unhemmed edges
- Low-mass designs
  - High damping factor allows thinner metal selection

Optional Features and Benefits

- Isolator mounts
  - Reduce/Contain high-frequency injector noise
  - Further improve shield durability
  - Thermally de-couple shields from heat source
- Five-layer shields
  - Increase thermal performance
  - Improve acoustic barrier properties

Before a part ever goes to production, Dana places high value up front through the design and analytical services it provides. All major Computer-Aided Design (CAD) platforms are supported in the design of the TAPS. Forming analysis is completed first to determine the manufacturability of the part before any tooling is fabricated.

Modal Analysis

Simulation predicts natural frequencies and mode shapes prior to cutting any tools and analyzes benefits of structural changes.

Intelligent Manufacturing Procedures

Highly automated production lines minimize lead time and cost.

Application Policy

Capacity ratings, features, and specifications vary depending upon the model and type of service. Application approvals must be obtained from Dana; contact your representative for application approval. We reserve the right to change or modify our product specifications, configurations, or dimensions at any time without notice.
